

Hampstead Valley 1

Location

Hampstead Valley 1 is the name of an existing detention basin located just south of Lower Beckleysville Road in Hampstead, Maryland. Constructed in the 1980's, the drainage area is approximately 47 acres, of which, 15 acres are impervious. The existing facility provides flood attenuation primarily for larger storms, but does not provide any water quality treatment.

Description

This facility will be retrofitted to a surface sand filter which will seek to repair the hydrologic impacts of development on the receiving stream. The outlet from the facility is the headwaters for Piney Run, a Use Class III cold water trout stream that enters Baltimore County.
