

Loch Raven Reservoir Hampstead Wastewater Treatment Plant

This tree planting was completed in the Loch Raven Reservoir watershed in Fall 2020. The planting reforested 5.77 acres of abandoned pastureland. The benefits of creating these buffers are numerous; trees along the stream provide habitat, filter runoff, and regulate stream temperature by providing shade.

This planting resulted in the reforestation of **5.77 acres** of county-owned property and a 400 foot wide (on average) forested stream buffer that spans approximately 780 linear feet of the stream. A total of **1,654 trees** were planted.
