

General Order

Department of Fire & EMS

G.O. #: 11-5-23

Subject: E-92/ In-service: Placement into engine status

Date: November 28, 2023

Authority: Chief, Michael W. Robinson/*MWR*

Effective this date and predicated on a successful inspection by DFEMS and CCVESA. The Reese & Community Volunteer Fire Company is placing in service, E-92.

E-92 is a 2007 Seagrave- “quint” with a 1250 gpm pump and a 600-gallon water tank. It’s designation as E-92 should clearly identify the functionality as a primary engine company. All testing and certification have been fulfilled consistent to NFPA 1900. The inspection team applied the quint standard to the tank capacity per item 6.3A of the class “A” pumper SOP.

E-92 is listed in the CAD as an engine and shall only be dispatched as such. Although it has additional capabilities including a 75’ ladder/waterway, its intended use is to be an engine company. This unit shall not under any circumstances replace or supersede any DFEMS approved ladder/aerial/tower. The CAD profile shall be consistent to this.

Please direct any questions to Chief Robinson.
